

# smartTWIN-FLIP

## Control and Comfort

### A better driving experience with smartTWIN-FLIP

Developed for the drivers of automatic vehicles who cannot operate a right foot accelerator, smartTWIN-FLIP gives the driver the option of having the pedal on either the right or the left side of the brake pedal.

smartTWIN-FLIP allows the car to be driven by both disabled and able-bodied drivers in a simple flip of the pedal which in turn, automatically flips the other pedal - a must for drivers who share one vehicle. At Autochair we only supply tailor made, vehicle specific kits, ensuring a guaranteed and consistent level of quality.

#### Key benefits

- As with all Autochair products, the smartTWIN-FLIP is professionally fitted by our expert fitters. The smartTWIN-FLIP mechanism is fitted behind the scenes leaving only the tailor made accelerator pedal visible
- smartTWIN-FLIP offers you 100% consistent performance using either the left or the right foot accelerator pedal
- Spacing between brake and accelerator pedal is matched to original pedals
- Positive engagement of the flip up mechanism ensures no accidental lowering of either pedal
- Kick down is still possible on almost every vehicle
- Allows the car to be driven by both disabled and able bodied drivers

*Users of the smartTWIN-FLIP may also benefit from the smartSTEER, a handheld steering device which enables the driver to operate the vehicles secondary functions at the touch of a button*
